

## COMPANY OVERVIEW

2020 Venture Partners LLC, was founded in January 2006 with the goal of providing technology and operations consulting to Private Equity Firms and Venture Capitalists in the areas of Telecommunication Infrastructure, Network Intelligence and Information and Communications Technology (ICT).

2020 Venture Partners LLC, was founded in January 2006 with the goal of providing technology and operations consulting to Private Equity Firms and Venture Capitalists in the areas of Telecommunication Infrastructure, Network Intelligence and Information and Communications Technology (ICT).

For start-up firms, 2020 Venture Partners provides advice on which technologies show the most promise for the future and how to deploy these emerging capabilities to support new business models. Often, this involves using the power of networking to integrate several promising new technologies to establish a sustainable marketplace advantage.

For existing firms, 2020 Venture Partners can demonstrate how disparate silos of technology that have developed within a business over many years can be integrated by using the power of IP to transform costs, capabilities and cycle times. Real-life examples demonstrate how simplifying and unifying outmoded information system structures on a common IP platform can cut costs drastically, provide better collaboration with partners and suppliers, and offer customers a dramatically-improved level of service. Such IT simplification can lead to higher productivity evidenced by such measures as revenue and EBITDA per employee, while simultaneously enabling customers to experience fewer defects, faster delivery times and a deeper electronic connection with the firm.

issued, pending and preparation. These have earned him the respect and admiration of fellow scientists and have gained him visibility amongst influential marketplace 'pundits' who acknowledge his ability to influence how private and public sector leaders must think if they expect to compete in a global economy.

In his recently published book '2020 Vision', Dr. Eslambolchi has set the foundation for the communications industry over the next two decades and he now predicts "broadband wireless will eat IP" and micro applications will dominate the industry. In his 'keynote' presentations to business, scientific and technology focused audiences across the world, Dr. Eslambolchi advances a 21st Century agenda that has become the transformational plan for global communications technology.
